Announcements Zowe version 1.28.5 is now available. You can download the installers for this release from the [Download](#) page. To learn what's new in this release, see the [Release notes](#).

Zowe, the integrated and extensible open source framework for z/OS, combines the past and present to build the future of mainframes. Like Mac OS, Windows, and others, Zowe comes with a core set of applications out of the box in combination with the APIs and OS capabilities future applications will depend on.

Zowe offers modern interfaces to interact with z/OS and allows you to work with z/OS in a way that is similar to what you experience on cloud platforms today. You can use these interfaces as delivered or through plug-ins and extensions that are created by clients or third-party vendors.

# Generative KI macht Wissensarbeiter 25 Prozent schneller und 40 Prozent besser

VON HOLGER SCHMIDT - AKTUALISIERT AM 22.09.2023 - 10:19

### Wie generative KI die Arbeit verbessert

● Ohne KI ● Mit KI, aber ohne Schulung ● Mit KI und vorheriger Schulung

Wissensarbeiter, die KI einsetzen, erledigten im Durchschnitt

- **12,2 Prozent mehr** Aufgaben
- waren **25,1 Prozent schneller**
- erzielten **40 Prozent bessere** Ergebnisse als Menschen ohne KI-Einsatz.

Die Ergebnisse der Wissensarbeiter, die vorher zusätzlich eine **KI-Schulung** bekamen, waren im Durchschnitt noch besser und ihre Ergebnisse gleichmäßiger verteilt (höhere Dichte).

# Generative Pretrained Transformer – How Do They Work?

- Anyone who has half an understanding of how ChatGPT works can certainly understand that the statements made by ChatGPT have to be questioned.
- Sam Altman constantly points out the shortcomings of ChatGPT and repeatedly expresses that one cannot rely on the statements of the software.

## ■ Generative

- Large language models (LLMs) convert words into tokens and these into contextualized vector embeddings. They **generate contextually appropriate texts** based on statistical predictions.
- LLMs can be used to **modify, analyze, or create text in a variety of ways**: Sentiment detection, named entity recognition, and text summarization are just a fraction of these capabilities.

## ■ Pretrained

- Pretrained refers to the process by which the model is initially trained on a massive amount of data, usually a **vast amounts of text from the internet**. This initial training allows the model to learn a vast range of patterns, structures, facts, grammar, reasoning.

## ■ Transformer

- The term **transformer** refers to a specific **deep learning architecture** that was introduced in a 2017 paper titled "**Attention Is All You Need**" by Vaswani et al.
- This architecture revolutionized the field of natural language processing due to its efficiency and capability to handle long-range dependencies in sequences.

- Large Language Models (LLMs)
  - Produce a probability distribution of predicting the next word that follows "I am ..."
    - happy
    - sad
    - rich
    - poor
    - making
    - busted
    - ...
  - **It doesn't copy text passages, it generates new text!**
  - **Natural language** as an interface

# Prompt Engineering – Tipps and Recommendations

- Prompts are the foundation of most AI tools, including ChatGPT, MidJourney and other tools.
- How well you can prompt defines the value you get from AI platforms.
- Prompt engineering is a mix of language skills, problem solving and applying logical thinking.
- The average user will get average results.
- We also use prompts to create images or audio.
  - text to video
  - text to audio

- Dialog immer mit Kontext starten (Rolle, Zielgruppe, Format, ...)
- Zyklisch und iterativ vorgehen => Chained prompting
- Bei "Fehlern" nicht aufgeben, sondern anpassen und wiederholen => Debugging
- Auf Gross/Kleinschreibung verzichten, Stichworte genügen
- ChatGPT ist im Englischen besser.
- Ausgabe mehrfach generieren (regenerate response)
- Alte Frage nachträglich korrigieren (Edit Button)
- Neuen Chat beginnen, wenn Sie ein anderes Thema/Szenario wünschen

The YouTube video titled "The 'Mainframe Kid'" tells the story of Connor, a young man who has a passion for vintage computers. Here's a summary of the video:

- Connor started collecting vintage computers several years ago, bringing home old teletype machines and tape drives. His interest in understanding how things work led him to computers.
- Connor's collection includes a variety of items, such as an IBM PC XT in its original box. For a science fair in seventh or eighth grade, instead of a typical project like a volcano or plant growth, Connor built a hydrogen gas generator.
- When Connor moved into his current house, he negotiated to have the basement as his space and began filling it with vintage computer equipment. His most notable acquisition is an IBM Mainframe, which he saw in an ad and decided he wanted.
- Despite initial resistance from his parents, Connor managed to bring the massive Mainframe home. They had to use a chain fall to lower it into the basement. After setting it up and turning it on, Connor spent the next three months learning how to operate it.
- Connor's story started gaining attention when people found out that an 18-year-old had a full-size IBM Mainframe in his basement. He was invited to speak about his experience in Texas, and his presentation was uploaded to YouTube, where it quickly gained hundreds of thousands of views.
- Following his speech, IBM invited Connor for a tour of their Poughkeepsie plant, where the Mainframe was created. Connor, who knew a lot about the history of these machines, was surprised and excited. He now works at IBM.
- Connor's story is a testament to the potential of pursuing niche interests. Despite the perception that mainframes are a niche field, Connor points out that there are many job openings in the area. His passion for vintage computers, particularly IBM machines, led him to a job and a career path he loves.
